# Juanita Lake Aquifer

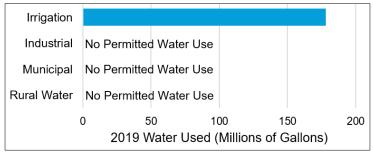

# **Foster County**

Aquifer At-a-Glance			
Area	4.1 square miles		
Aquifer Type	Unconfined Surficial		
Major Land Uses over Aquifer	Grassland/Pasture (34%)		
(percentage of aquifer area covered in 2017) <sup>1</sup>	Open Water/Wetlands (33%)		
Depth to Water (2020)*	3-13 feet		
Total Unique Wells Sampled	4		
Wells Sampled in 2020	4		
Samples Collected in 2020	4		
Years Sampled	1995, 2000, 2005, 2010, 2015, 2020		
*Depths to water may vary seasonally	y, year to year, and across the aquifer		

- Aquifer materials consist of sands and gravels that fill an ancient valley that was carved by meltwater from glaciers. The aguifer consists of two layers separated by clay till deposited by glaciers.2
- The aguifer has an average thickness of 40 feet.<sup>2</sup>
- Domestic, irrigation, and stock wells are installed in the aquifer.
- In North Dakota, permits are required to withdraw large quantities of groundwater. In 2019, 178 million gallons of permitted water were drawn from the aquifer; irrigation use consumed the largest quantity of water. For more information on water use and permits, contact the North Dakota State Water Commission (swc.nd.gov).

2019 Juanita Lake aquifer permitted water use (from North Dakota State Water Commission (swc.nd.gov))

# **About the Agricultural Groundwater Monitoring Program**

- The North Dakota Department of Environmental Quality monitors a network of wells in approximately 50 surficial aguifers that are at elevated risk of agricultural contamination.
- Aquifers are sampled on a 5-year rotation.
- Monitoring began in 1992.
- The vast majority of these aquifers are located in central and eastern North Dakota.
- Water is tested for 21 general chemistry parameters, eight trace metals, and 64 pesticides.

# **Water Chemistry**

Is Aquifer
Water
High in?

Analyte	Result	2020 Median Concentration	Potential Effects	
Arsenic	NO	< 0.005 mg/L	Skin or circulatory system damage, increased cancer risk	
Iron	YES	0.82 mg/L	Metallic taste/odor, discoloration of surfaces	
Manganese	YES	0.15 mg/L		
Sodium	NO	58.2 mg/L	Taste, people with certain health conditions may need to limit intake	
Sulfate	NO	184 mg/L	Taste/odor, laxative effect for people not used to the water	
For more information about Maximum Contaminant Levels (MCLs) health effects, and treatment entires for these contaminants and more				

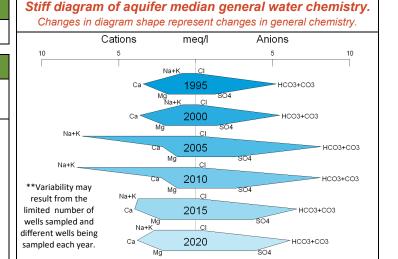

For more information about Maximum Contaminant Levels (MCLs), health effects, and treatment options for these contaminants and more, see the NDDEQ's fact sheets (deq.nd.gov/wq/1\_Groundwater) or visit the US EPA website (epa.gov/ground-water-and-drinking-water).

Dominant Water Type	Water Hardness
Calcium-Bicarbonate	Very Hard

### **Nitrate**

Percentage of Wells Exceeding the Nitrate Maximum Contaminant Level (MCL)\* (10 mg/L as N).

No Nitrate MCL Exceedances

### **Pesticides**

Percentage of wells with detections of each pesticide detected in the aquifer.

**No Pesticide Detections** 

### **State Pesticide Management Plan**

Agricultural Groundwater Monitoring Program aquifers are monitored as a part of the State Pesticide Management Plan. A Prevention Action Level (PAL) threshold of 25% of the pesticide's Maximum Contaminant Level (MCL)\* or Health Advisory Level (HAL) is used to identify whether action is needed to prevent further contamination.

Prevention Action Level Exceedances	None
MCL or HAL Exceedances	None

Number of Unique Wells with Pesticide Detections since 1995

**0** of 4 Total Wells

### **2020 Pesticide Detections**

No Pesticide Detections

\*Note that MCLs are for public drinking water systems; private wells are not regulated in North Dakota. MCLs still provide guidelines for drinking groundwater.
